CLUB FITTING

The equipment you use can carry a tremendous influence on how well you play. There is no other club fitting system in the world that comes remotely close to the precision of the TFS.

We've analyzed the swings of over 4,000 players ranging from beginners to tour players and developed a software program based on their tendencies and preferences.

First, we convert your club speed to shaft frequency and then apply your swing characteristics such as tempo, speed of release, length of swing, divot depth and angle of attack. The final product is a comprehensive comparison of your equipment versus your recommended equipment. Test clubs are available for you to try so you can experience the difference. All golf school programs include a club fitting.
